

The Great PHA Facilitator DEMO

©2003-2017 KnowledgeOne

Quick Start Instructions

1. Save the folder to your hard drive, unzip it by double clicking and move the files outside of the zip folder. Do not work from inside the zip folder.
2. **Windows 7 or better, or Windows 10 are required for all the features to work!**
3. Open the folder 'The Great PHA Facilitator' and double click on the file named 'The Great PHA Facilitator'; after a few seconds the program will open and ask for an account and password.
4. Use the account name 'Demo' and password 'demo' (case sensitive) to start the program.
5. Example Nodes and Worksheets, Facility Siting and Human Factors questions, simulated P&ID files, etc., are provided. You can add more records to the ones provided (except for nodes) and edit existing data. You can export the data to Excel or print reports. You cannot delete records or create a new PHA in the Demo version.

For detailed instructions see the Help menu.

The differences between the Demo version and the full version are:

1. The Demo account replaces the full-version Scribe account.
2. There's no Admin account in this version.
3. When trying to use features that have been disabled (very few) the program will warn you that you don't have enough privileges for that action.

Otherwise the program will behave the same way as the full version.
