**The Great PHA Facilitator
DEMO
©2003-2006 KnowledgeOne**

Quick Start Instructions

1. Save or copy the folder to your hard drive and unzip it by double clicking.
2. If obtained from a CD (not downloaded) the folder does not need to be unzipped, but you have to remove the write protection for the folder and its contents.
3. **Windows XP or Windows 2000 or better are required for the program to work!**
4. Open the folder and double click on the file named 'The Great PHA Facilitator Demo.exe'.
5. Use the account name 'Demo' and password 'demo' (lower case) to start the program.
6. An example Node and two Worksheets are provided. You can add more records to the ones provided or click on the 'New PHA' button (Team/Setup screen) to start from scratch (all the provided information will be deleted).

Detailed instructions are in the file named 'The Great PHA Facilitator Instructions' as well as inside the program (see Help menu).

The differences between the Demo version and the full version are:

1. The Demo account replaces and has the same privileges as the Scribe account in the full version.
2. There's no Admin account in this version.
3. All sections are limited to a maximum of five records each (e.g., maximum five nodes, maximum five worksheets).
4. Printing has been disabled (but all reports can be previewed).

Otherwise the program will behave the same way as the full version.
